Projects

Telegram Group Manager
Personal Project *January,2019*
- A Telegram Bot for managing the official Codex group.
- Greets a new member on joining the telegram group and sends them the group rules and other important links.
- Built in fetcher for xkcd comics.
- Technologies Used: Python, Telegram Api, Heroku deployment

Radical
Team Project *October,2018*
- A price notifier extension for Chrome browser.(for Flipkart and Amazon)
- The price and product information is retrieved by scraping the product page and a database is used to store both the information about the client and their products and prices.
- Notifies a user when the price drops by sending an email.
- The user can also specify a threshold which in turn only notifies when the price drops below it.
- Technologies Used: JavaScript, HTML5, CSS3, PHP, MySQL

MPEX(Mini Project Expander)
Personal Project *Ongoing*
- A project expander and descriptor for developers using Git.
- UI based python application which keeps track of all the sources used and also custom notes by the user that are input into it. Also provides a simple ui based interface for various Git commands.
- Stores the data in text file created along with the project by the app or specified by the user.
- Technologies Used: Python, Git

Competencies

Programming Python, Java
Familiar Git, GNU Octave, Linux, MySQL, Machine Learning, TensorFlow, Web Scraping
Interpersonal Attention to Detail, Adaptability, Teamwork, Problem Solving, Communication
